

13. Skin conductance

Conductance of human skin is often dependent on psychological condition and emotional stimulation. Suggest an interesting problem requiring experimental measurements of respective parameters

Theory

1. qualitative explanations
2. physic explanations
3. description of physic factors

1. theory is not connected with the experiment in the practice
2. not understandable identifying of genres
3. affection of the human parametrs

est.1972

Experiment

1. good factors
2. good methodology

1. not understandable criterias of genre
2. too less experiment
3. no theoretical prediction of the experiment\
4. no demonstration

Summaries and conclusions

Water and vegetable oil do not mix and form two layers in a beaker. It is possible to fill the beaker with many more layers of immiscible fluids. How many layers can you obtain? Investigate the motion of the interfaces if the beaker is disturbed or shaken

Qualitative explanation

- good

Good

Theoretical investigation

- only physical

Unclear

Experimental verification

- no connected with the theory

Unclear

Discussion

1. What is the genre of films

2. The affection of the people

-

est.1972
