IYNT 2013 - Turkie

# Problem

26. Sunny spot. Produce a reflected light spot on a nearby wall. Investigate its shape. Now produce a similar spot on a remote wall. Compare and explain the two shapes.

# Questions

- What happens When the source of light is bigger or smaller?
- Why do you see it like a circle?
- How does it change in infinity?

+

-

- He had a example for each things he talked about.
- Their approach was good for resolving the problem.

- He didn't have centralization on the power point.
- They had dictation mistakes
- If he said the power point by himself it would be better
