IYNT 2019 MINSK

7.Burning glass

Reviewer presentation

Reporter

theory, experiment, results

Strong points	Weak points
Converging and diverging lenses - explanation	Strange plan
Great use of photos (explaining the setup)	Not getting into details in theory about types of lenses – that can help for better understanding
Used diagrams that paid attention about the color(it's important actually)	Not very well explained the formulas and graphs – hard to understand
He did both theoretical and real life	Didn't mentioned important variables like outside temperature and humidity
	Possible errors from hand moving (human error)
	Materials didn't vary
	No references for the theory

Opponent

comments, discussion

Strong points	Weak points
Asked clear and relevant questions in discussion	In discussion he asked about refraction (not in presentation and theory based question - braking rules)
Showed most of the problems in the experimental part	
Discussed on both theory and experiment	
Talks with confidence
