

14. Chemical Oscillators

Opponent

Konstantinos Gkanatsios

Theory

Pros:

The theory was sufficient and relevant

Cons:

He used another study for his presentation instead of his own

He didn't explain the formulas enough

Experiment

Pros:

The results were presented with good graphs

He showed a video that helped understand the experiment

Cons:

He should have used more chemical oscillators

Conclusions

In the theory he used another study to explain the phenomenon

The experiment was well structured but could have been better

Thank you
