

# 24. Oscillations

Opponent

Konstantinos Gkanatsios

# Theory

Pros:

The theory was relevant

Images made the theory  
easily understandable

Cons:

We believe that the theory  
needed some more  
information to be complete

# Experiment

Pros:

The results were presented with good graphs

Cons:

There were some variables missing

There was neither a conclusion nor a hypothesis

# Conclusions

The theory was relevant though it was missing some information to be complete

The reporter didn't use their time efficiently thus the experiment was rushed

Thank you
