16. GRANULAR MATERIALS

Team Croatia
Reviewer: Elena Lukačević
Suggest a study involving properties and behavior of granular materials.
No theoretical slides (nor hypotheses)
Didn’t repeat experiments
Almost no quantitative data and no analysis or comparison
Reading from notes during the whole presentation
OPPONENT

- Good clarifying questions (repeatability of experiment)
- Noticed that there was no theoretical model
- Noticed the lack of quantitative data and problems with repeatability
DISCUSSION

• Why does the pressure of the sand remain unchanged?
• Effects of vibration on different granular materials?

• Intetresting points
• Could’ve discussed the parameters more
THANK YOU!
